

4 Figures and Tables

4.1 Normal Figures and Tables

Figures and tables can be inserted just like in any standard \LaTeX document. The `graphicx` package is already loaded and configured in such a way that the figure width is equal to the `textwidth` and the height is adjusted in order to maintain the original aspect ratio. As you may have imagined, the captions will be positioned... well, in the margins. This is achieved with the help of the `floatrow` package.

Here is a picture of Mona Lisa (Figure 4.1), as an example. The captions are formatted as the margin- and the side-notes; If you want to change something about captions you can use the command `\captsetup` from the `caption` package. Remember that if you want to reference a figure, the label must come *after* the caption!

4.1 Normal Figures and Tables	13
4.2 Margin Figures and Tables	14
4.3 Wide Figures and Tables . .	15

Figure 4.1: It's Mona Lisa again. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.
